- Sequence Data & Sequence questions
- Single Sequence Properties
 - simple: length, distinct states, pattern
 - complex: entropy, complexity
- Applications to Family Formation and Labor Market Entry

- Relative Entropy
- Labor Market Entry Data

Sequences

In social science, sequences arise when we study

- life courses
- family formation trajectories
- mobility histories
- school/work/employment careers
-

Code	Behavior/Status	Code	Behavior/Status
E	Employed	S	Single
U	Unemployed	U	Unmarried cohabitation
T	Vocational Training	M	Married
S	School	SC	Single with child(-ren)
F	Further education	UC	Cohabitation with child(-ren)
H	Higher education	MC	Married with child(-ren)

- the set of codes is called an “alphabet”
- two alphabets: school/work careers and family formation

Alphabets

- Structure
- Sequences
- Sequences
- Encoding Examples
- **Alphabets**

- Something happened in France!
- Internal Variation
- Entropy: Unpredictability
- Entropy Formal
- Entropy of a fair coin
- Entropy of all coins
- Entropy of sequences

- the individual codes imply mutually exclusive behaviors or states
- small alphabet:
 - “poor”, “scarce” descriptions
 - finding “structure” less difficult
 - more identical patterns
- big alphabet:
 - “rich”, “detailed” descriptions
 - finding “structure” more difficult
 - less distinct patterns
- choosing an alphabet is determined by theory and/or purpose of the analysis

Sequence Data

- Structure
- Sequences
- Sequences

- Relative Entropy
- Labor Market Entry Data

Come in different formats:

- XT-format (“run-length encoding”):

covariates
states & durations=spells

$\overbrace{956770.842\ 20\ 2\ 0\ 4\ 4}^{\text{covariates}} \quad \overbrace{S/25\ M/11\ MC/85\ SC/15\ UC/2\ MC/6}^{\text{states \& durations=spells}}$

- XX-format:

covariates
states

$\overbrace{95677\ 0.842\ 20\ 2\ 0\ 4\ 4}^{\text{covariates}} \quad \overbrace{SS \dots S \quad M \dots M \quad MC \dots MC \dots}^{\text{states}}$

25
11
85

Questions about Sequences I

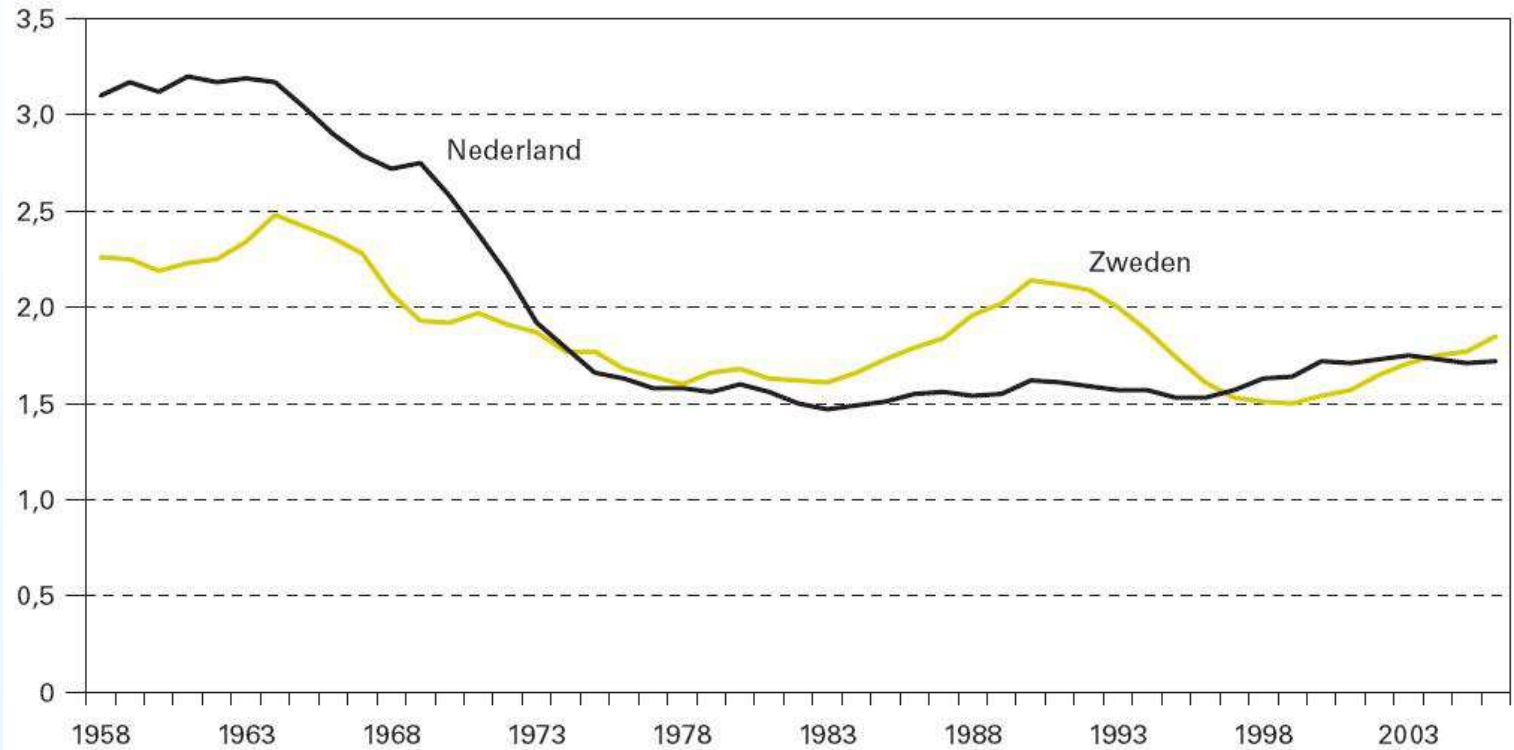

Either pertain to a particular type of event: e.g. entering parenthood

- occurrence (reproduce?)
- ordering (before marriage?)
- timing (at what age?)
- frequency (how often?)

- Structure

Questions about Sequences II

Or pertain to sequences “as a whole”:

- to properties of single sequences
 - simple properties: # distinct states
 - compound properties: complexity, type
- to properties of pairs of sequences
 - (dis-)similarity/distance (e.g. careers)
 - correlation (careers & family formation)
- to properties of sets of sequences
 - homogeneity
 - typology, classification, partition

- Structure

- Entropy Formal
- Entropy of a fair coin
- Entropy of all coins
- Entropy of sequences

- collected between 1988 - 1999: not very recent
- UN-ECE controlled in 25 countries: 19 selected
 - 42140 records selected
- 4 birth cohorts
 - born between '45-'49, '50-'54, '55-'59, '60-'64
 - women only
- Family Formation Histories: 6 distinct statuses

Single	S	with ≥ 1 Child	SC
Married	M		MC
Unmarried coh.	U		UC
- covering ages 18-30 years: 144 monthly statuses
 - record: S/68 U/2 M/53 MC/21

Something happened in France!

	'45-'49	'60 -'64
average # dist. states	2.87	3.11
average length	2.96	3.42
% S M MC	48.4	14.5
% S U M MC	5.7	11.6
% Miscellaneous	18.8	38.5
% dist. trajectories	13.3	18.7

... like in most other countries

- Entropy of all coins
- Entropy of sequences
- Relative Entropy
- Labor Market Entry Data

- consider an alphabet \mathcal{A}
 - e.g. $\mathcal{A} = \{S, U, M, SC, UC, MC\}$ or $\mathcal{A} = \{0, 1\}$
- and X a random variable over the alphabet \mathcal{A}
 - $p(x) = \text{Prob}(X = x)$ with $x \in \mathcal{A}$
- Entropy $H(X)$ is a property of X :
 - $H(X) = - \sum_{x \in \mathcal{A}} p(x) \log_2 p(x)$
 - convention: $0 \log 0 = 0$

Entropy of a fair coin

- Something happened in France!
- Internal Variation
- Entropy: Unpredictability
- Entropy Formal
- Entropy of a fair coin
- Entropy of all coins
- Entropy of sequences

- Entropy is maximal when distribution is “flat”: equiprobable states

- $p(x) = \frac{1}{k}$ for $|\mathcal{A}| = k$

- Maximal entropy increases with size of alphabet

- $H(X) = -\sum \frac{1}{k} \log_2 \frac{1}{k} = \log_2 k$

- $0 \leq H(X) \leq \log_2 |\mathcal{A}|$

- Relative entropy: $0 \leq \frac{H(X)}{\log_2 |\mathcal{A}|} \leq 1$

Labor Market Entry Data

- 712 records of School Work Statuses
- from youngsters that were 16 in 1993
- i.e. at the end of compulsory education
- observed for consecutive 72 months

Status	Code	Status	Code
Employed	E	Unemployed	U
Training	T	School	S
Further Education	F	Higher education	H

(McVicar, D. & M. Anyadike-Danes, 2002)

42 0.21 1 1 1 0 0 0 0 0 1 0 0 1 E/11 U/5 T/1 E/4 T/27 U/18 E/2 U/2

$$x = U/36 \ E/36$$

$$y = U/18 \ E/18 \ U/18 \ E/18$$

$$H(x) = -2\left[\frac{36}{72} \log_2 \frac{36}{72}\right] = 1 = H(y)$$

- Entropy is sensitive to event-frequency, not to event-order!
- “Variation” in y exceeds the “variation” in x
- What do we mean by “variation”?

Quantifying through Subsequences

Toy-sequence: *abacb*

Subsequences: generate by taking away characters

Take	Subsequences
5 (all)	λ (empty)
4	<i>a, b, c</i>
3	<i>ab, ac, bb, ...</i>
2	<i>aac, bcb, ...</i>
1	<i>abac, abcb, ...</i>
0 (none)	<i>abacb</i>

$\phi(x)$: # distinct subsequences of x

$$\phi(abacb) = 26, \quad 1 \leq \phi(x_1 \dots x_n) \leq 2^n$$

- each **state** is assigned a **fixed** color/shading
- for each sequence
 - for each state, create a bar of appropriate color,
 - of a length, proportional to duration of the state
 - and stack the state-bars in the right order
- order the stacked bars according to some criterion
 - e.g. time spend in a particular state
 - loading on some MDS- or PC-dimension

Sequence Index Plots: Example

- Structure
- Sequences
- Sequences
- Encoding Examples
- Alphabets
- Sequence Data
- Questions about Sequences I
- Children/Woman
- Mother's Age at 1st Birth
- Questions about Sequences II
- Sequence Methods
- Example-issues for Sequence Methods
- Single-Sequence Properties
- Data: Family and Fertility Survey
- Something happened in France!
- Internal Variation
- Entropy: Unpredictability
- Entropy Formal
- Entropy of a fair coin
- Entropy of all coins
- Entropy of sequences

- Relative Entropy
- Labor Market Entry Data
