Sierk Ybema 2016 – 2017 thesis supervision

Thesis topics that I supervised in the past usually covered such topics as radical organizational change, cross-boundary collaboration, control and resistance.

In 2016-2017 I might have research opportunities specifically in health care settings (in collaboration with PhD-students Mariël Jurriëns, Sarah van Duijn, Luzan Koster, Ludo Glimmerveen): problematic implementation process of an evidence-based innovation for cancer patients, complicated and conflict-ridden negotiations between insurers and care providers, negative image and change in elderly care, governance of integrated (or not-so-integrated) health care.
